Project - “Pagina de Psihologie”
BUG Report

ID: BUG-001

TITLE: [Slider Menu] Transparency causes text to overlap in the Search Field

PRECONDITIONS:

1. User is a guest user (not registered/logged in).
2. Website -> opened in Browser Mobile Viewport
3. Home Page -> fully loaded.

STEPS TO REPRODUCE:

1. Navigate to Home Page
2. Click on -> Burger Menu Icon -> the Slider Menu opens
3. Click on -> Slider Menu Search Field.
4. Type the search term

INPUT VALUES: "Anita Moorjani"

EXPECTED RESULT: The Slider Menu should be fully opaque (non-transparent). Background text from the Main Page should be completely hidden so the user can type and read the Search Field clearly.

ACTUAL RESULT: The Slider Menu is semi-transparent. Text from the underlying Home Page overlaps with the typed search words and causes visual confusion.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

Windows 11 Version 25H2

Google Chrome Desktop (153.0.8010.48) using DevTools.

Responsive Mode (Viewport: 400x668), Production Environment.

DEVELOPER LOGS: -

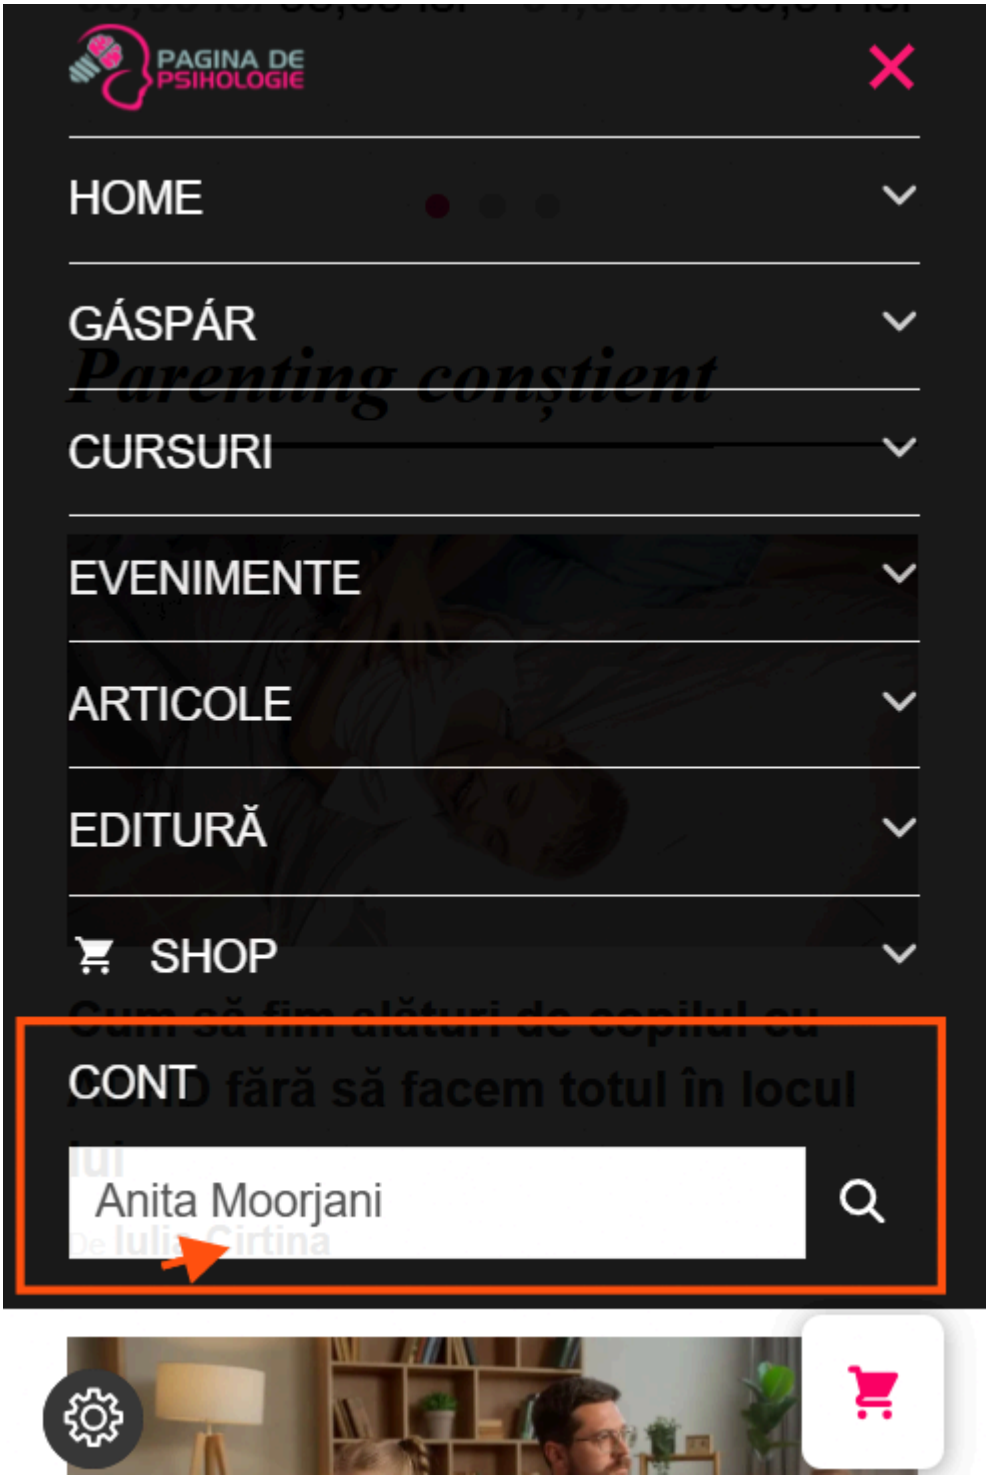

PRIORITY/SEVERITY:

Priority Medium / Severity Low *(The functionality still works, but it causes a poor user experience and visual clutter).*

ADDITIONAL INFORMATION: -

ATTACHMENTS: [Slider Menu] Transparency causes text overlap.png

ID: BUG-002

TITLE: [Slider Menu] notification-message-container overlaps the Slider Menu Search Field

PRECONDITIONS:

1. User is a guest user (not registered/logged in).
2. Website -> opened in Browser Mobile Viewport
3. Home Page -> fully loaded.

STEPS TO REPRODUCE:

1. Navigate to Home Page
2. Click on -> Burger Menu Icon -> the Slider Menu opens
3. Click on -> Slider Menu Search Field
4. Type the searched term
5. Wait for the automated *.notification-message-container* to popup on screen.

INPUT VALUES: "Anita Moorjani"

EXPECTED RESULT: The *.notification-message-container* should render lower on the screen while the Slider Menu is active, keeping the Search Field completely unobstructed.

ACTUAL RESULT: The *.notification-message-container* triggers dynamically and overlaps the lower side of the Slider Menu, partially covering the Search Field and causing visual clutter.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

Windows 11 Version 25H2

Google Chrome Desktop (153.0.8010.48) using DevTools.

Responsive Mode (Viewport: 400x668), Production Environment.

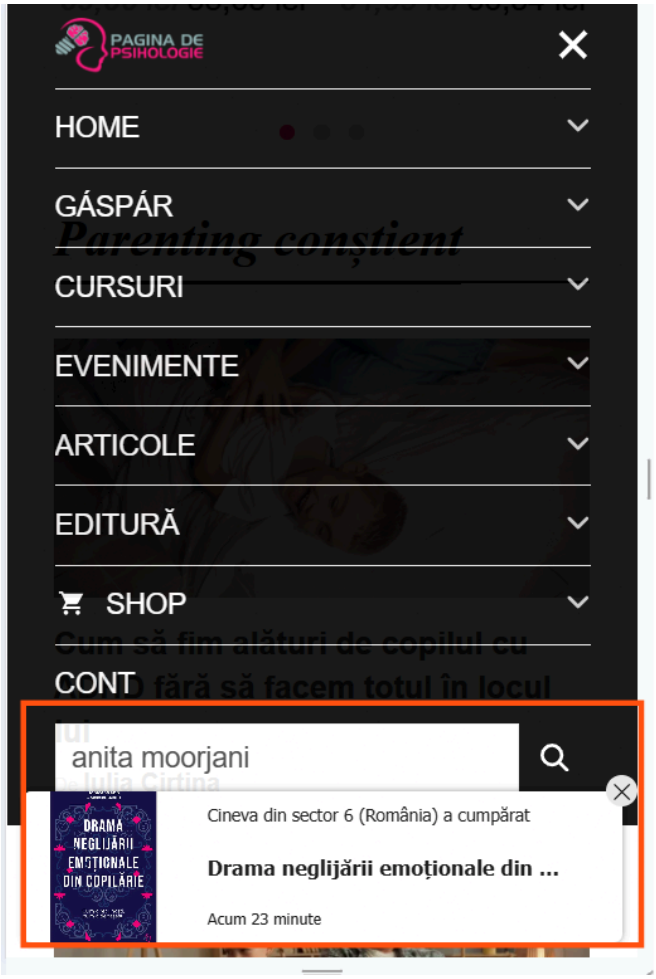

DEVELOPER LOGS: -

PRIORITY/SEVERITY: Priority Low / Severity Low *(The functionality still works, but it causes a poor user experience and visual clutter).*

ID: BUG-003

TITLE: [Slider Menu] Click on "notify-close" Button unexpectedly triggers Slider Menu closing

PRECONDITIONS:

1. User is a guest user (not registered/logged in).
2. Website -> opened in Browser Mobile Viewport
3. Home Page -> fully loaded.

STEPS TO REPRODUCE:

1. Navigate to Home Page
2. Click on -> Burger Menu Icon -> the Slider Menu opens
3. Click on -> Slider Menu Search Field
4. Type the searched term
5. Wait for the automated *.notification-message-container* to popup on screen
6. Click on the *.notify-close* Button of the notification popup -> triggers closing of the Slider Menu.

INPUT VALUES: "Anita Moorjani"

EXPECTED RESULT: Clicking the *.notify-close* Button should only dismiss the *.notification-message-container*. The Slider Menu must remain open so the user can continue typing their search without disruption.

ACTUAL RESULT: Clicking the *.notify-close* Button dismisses the popup, but simultaneously triggers the close event for the entire Slider Menu. While the typed text is preserved in the field, the navigation drawer closes abruptly, breaking the user flow and requiring to re-open the Slider Menu to resume typing.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

Windows 11 Version 25H2

Google Chrome Desktop (153.0.8010.48) using DevTools.

Responsive Mode (Viewport: 400x668), Production Environment.

DEVELOPER LOGS: **Red JavaScript error** triggered immediately upon clicking the *.notify-close* button:

Unable to preventDefault inside passive event listener invocation.
window.viSwipeDetect.touchsurface.addEventListener.passive @
woocommerce-notification.min.js:1

PRIORITY/SEVERITY: Priority High / Severity Medium *(The functionality still works, but it causes a poor user experience. It directly impacts one of the core business flows: the book purchasing process).*

ADDITIONAL INFORMATION: The *.notification-message-container* Pop up is an element that is displayed in every page of the Website. But the issue is isolated strictly to the interaction inside the open Slider Menu. The click listener on the active Slider Menu area seems to mistakenly capture the click event linked to the *.notify-close* Button.

ID: BUG-004

TITLE: [Search] Slider Menu Search Field fails to return existing catalog results compared to Site Header Search

PRECONDITIONS:

1. User is a guest user (not registered/logged in).
2. Website -> opened in Browser Mobile Viewport
3. Home Page -> fully loaded.
4. The Product Catalog contains at least 1 book by the author "Anita Moorjani”
5. The Book is labeled ‘’Out of stock’’

STEPS TO REPRODUCE:

1. Navigate to Home Page
2. Click on -> Burger Menu Icon -> the Slider Menu opens
3. Click on -> Slider Menu Search Field
4. Type the searched term "Anita Moorjani" -> press “Enter”
5. Observe the Search Results Page.
6. Return to the Home Page or any page
7. Tap on the fixed Search Field located in the *.site-header* -> type "Anita Moorjani" -> press Enter.
8. Observe and compare the Search Results Page.

INPUT VALUES: "Anita Moorjani"

EXPECTED RESULT: Both search fields should return identical database results (in this case 1 book found for the searched author).

ACTUAL RESULT: The Slider Menu search returns the message "Nu am găsit niciun rezultat pentru aceasta cautare", while the *.site-header* search successfully retrieves 1 matching book from the catalog.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

Windows 11 Version 25H2

Google Chrome Desktop (153.0.8010.48) using DevTools.

Responsive Mode (Viewport: 400x668), Production Environment.

DEVELOPER LOGS: -

PRIORITY/SEVERITY: Priority High/ Severity Medium (This bug directly impacts one of the core business flows: the book purchasing process. If users rely on the Slider Menu Search, they will falsely assume there are no books from that author, abandoning the shopping process.)

ADDITIONAL INFORMATION: Console information:

Root Cause: The search engine (TNTSearchMySQL) failed to return a match for the specific string "anita moorjani" within the filtered scope. The request URL shows the search is restricted to post_type=product; if the book is not explicitly categorized as a WooCommerce product, it will be excluded.

Suggestions:

- **Check Product Type**: Verify the book is published as a "Product" in WooCommerce, not just a "Post" or "Page."
- **Rebuild Index**: In the WordPress admin, go to the Ajax Search for WooCommerce settings and trigger an index rebuild. TNTSearch often fails to find existing items if the index is stale.
- **Test Partial Queries**: Try searching for just "Moorjani." If that works, the engine may be struggling with the full name or the space between words.
- **Check Engine Logic:** The previous aborted request for anita moorja suggests the live-search is canceling requests rapidly. Ensure the final search isn't being interrupted by subsequent background scripts.

ID: BUG-005

TITLE: [Global UI] Star rating icons fail to render and display as overlapping "SSSSS" and "sssss" characters site-wide (Catalog and Product Pages)

PRECONDITIONS:

1. Any website page containing the *.site-header* and the Top Bar Search Field is fully loaded.
2. The website database contains products with existing user reviews and star ratings.

STEPS TO REPRODUCE:

Scenario A: Catalog Page

1. Navigate to any website page
2. Click on the *.site-header* Search Field -> type "Harville Hendrix" -> press Enter
3. On the Catalog Page under books titles Overlapping "S" characters are displayed

Scenario B: Product Page (Top Section & Reviews Section)

1. Click on any book from the results to open its Product Page.
2. Observe the rating area located under the book title.
3. Scroll down to the Customer Reviews section
4. Observe the rating area located below each user's review date

INPUT VALUES:

Any valid author name (e.g., "Harville Hendrix", "Shefali Tsabary")

EXPECTED RESULT: Graphical 5-star review icons should render clearly in all situations: Catalog Page, Product Page (header and user reviews section).

ACTUAL RESULT: The graphical star icons are completely missing site-wide. Instead, uppercase "SSSSS" and lowercase "sssss" letters are rendered on top of each other, resulting in an overlapping text where the star icons should be. This happens in 3 distinct locations:

1. Catalog Page (under each Book Title)
2. Product Page top section (under the Book Title)
3. Product Page reviews section (under each user's review date)

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

Windows 11 Version 25H2
Google Chrome Desktop (153.0.8010.48) using DevTools.
Responsive Mode (Viewport: 400x668), Production Environment.

DEVELOPER LOGS: -

PRIORITY/SEVERITY:

- **Severity:** Medium (Core checkout flow is functional, but globally breaks page presentation)
- **Priority:** High (Directly affects product presentation site-wide, affecting customers trust)

ADDITIONAL INFORMATION:

- **User Experience/Impact:** From a user perspective, this visual defect damages brand credibility. The overlapping "S" characters mimic the sloppy design patterns frequently found on fraudulent or unsafe websites.
- **Transaction Friction:** Because the overlapping letters resemble currency or price symbols, users could associate the error with broken pricing calculations, raising immediate anxieties regarding checkout accuracy and pushing them to seek the items on competitor websites.

ID: BUG-006

TITLE: [Product Page] Customer reviews section fails to display the average score and the total number of reviews for specific products

PRECONDITIONS:

- Any website page containing the *.site-header* and the Top Bar Search Field is fully loaded.
- The website database contains the product "Terapia imago" by author "Harville Hendrix", which has existing user reviews.

STEPS TO REPRODUCE:

1. Navigate to any website page
2. Click on the *.site-header* Search Field -> type "Harville Hendrix" -> press Enter
3. On the Catalog Page find and click on the specific product "Terapia imago" to open its Product Page.
4. Under the Book Title observe the average score and the total number of reviews.

INPUT VALUES:

- Search string: "Harville Hendrix"
- Selected Product: "Terapia imago"

EXPECTED RESULT: The website should display both the average score and the total number of reviews.

- **Format Example:** 4.96 (11 recenzii)

ACTUAL RESULT: The website only shows the score. The space inside the parentheses is completely empty.

- **Observed Format:** 4.96 ( )

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

Windows 11 Version 25H2

Google Chrome Desktop (153.0.8010.48) using DevTools.

Responsive Mode (Viewport: 400x668), Production Environment.

DEVELOPER LOGS: Pending backend payload inspection. (Root Cause Hint: Data binding anomaly or localized null pointer issue. The total review count variable or

localized string template (%d recenzii) fails to populate or return data on specific dynamic endpoints, despite the aggregate score floating-point value being successfully queried).

PRIORITY/SEVERITY:

- **Severity:** Low (Minor UI layout omission; the functionality of the page and checkout remains unaffected)
- **Priority:** Medium (Should be resolved to maintain consistent text layouts across all Product Pages)

ADDITIONAL INFORMATION:

- **Reproduction Rate:** Out of 12 different books product pages tested, only 2 specific products exhibited this data omission. The remaining 10 pages successfully displayed the reviews count text (e.g., 4.96 (11 recenzii)).
