Project - “Pagina de Psihologie”

Table of Contents

BUG-001 [Burger Menu] Transparency causes text to overlap in the Search Field when Burger Menu is expanded 2

BUG-002 [Burger Menu] Automated Notification Message totally covers the Search Field when Burger Menu is expanded 5

BUG-003 [Burger Menu] Notification Message close button triggers menu closing when clicked 8

BUG-004 [Search] Mismatch between the 2 Search Fields results and the Suggestions List when searching the same product 11

BUG-005 [Global UI] Star rating icons fail to render and display as overlapping "SSSSS" and "sssss" characters site-wide 17

BUG-006 [Product Page] The total number of reviews and its corresponding text is missing for some products 22

BUG-007 [Checkout Form] ‘’Conecteza-te’’ anchor link doesn’t redirect to Login Page when clicked 25

BUG-008 [Checkout Form] Missing error messages for some fields when user types invalid data 28

BUG-009 [Checkout Form] The hidden "Livrare Cod postal" and "Livrare Telefon" fields still trigger validation errors when "La fel ca datele de livrare" box is checked 32

BUG 010 [Audit][Cart Icon] Floating Cart Icon triggers audit failure due to positive tabindex value 36

BUG 011 [Audit] [Homepage] Book Icon link lacks descriptive text when keyboard-focused 39

BUG-012 [Audit][Product Page] Informative book cover image relies only on AI ability to extract text title from the picture when using screen readers 43

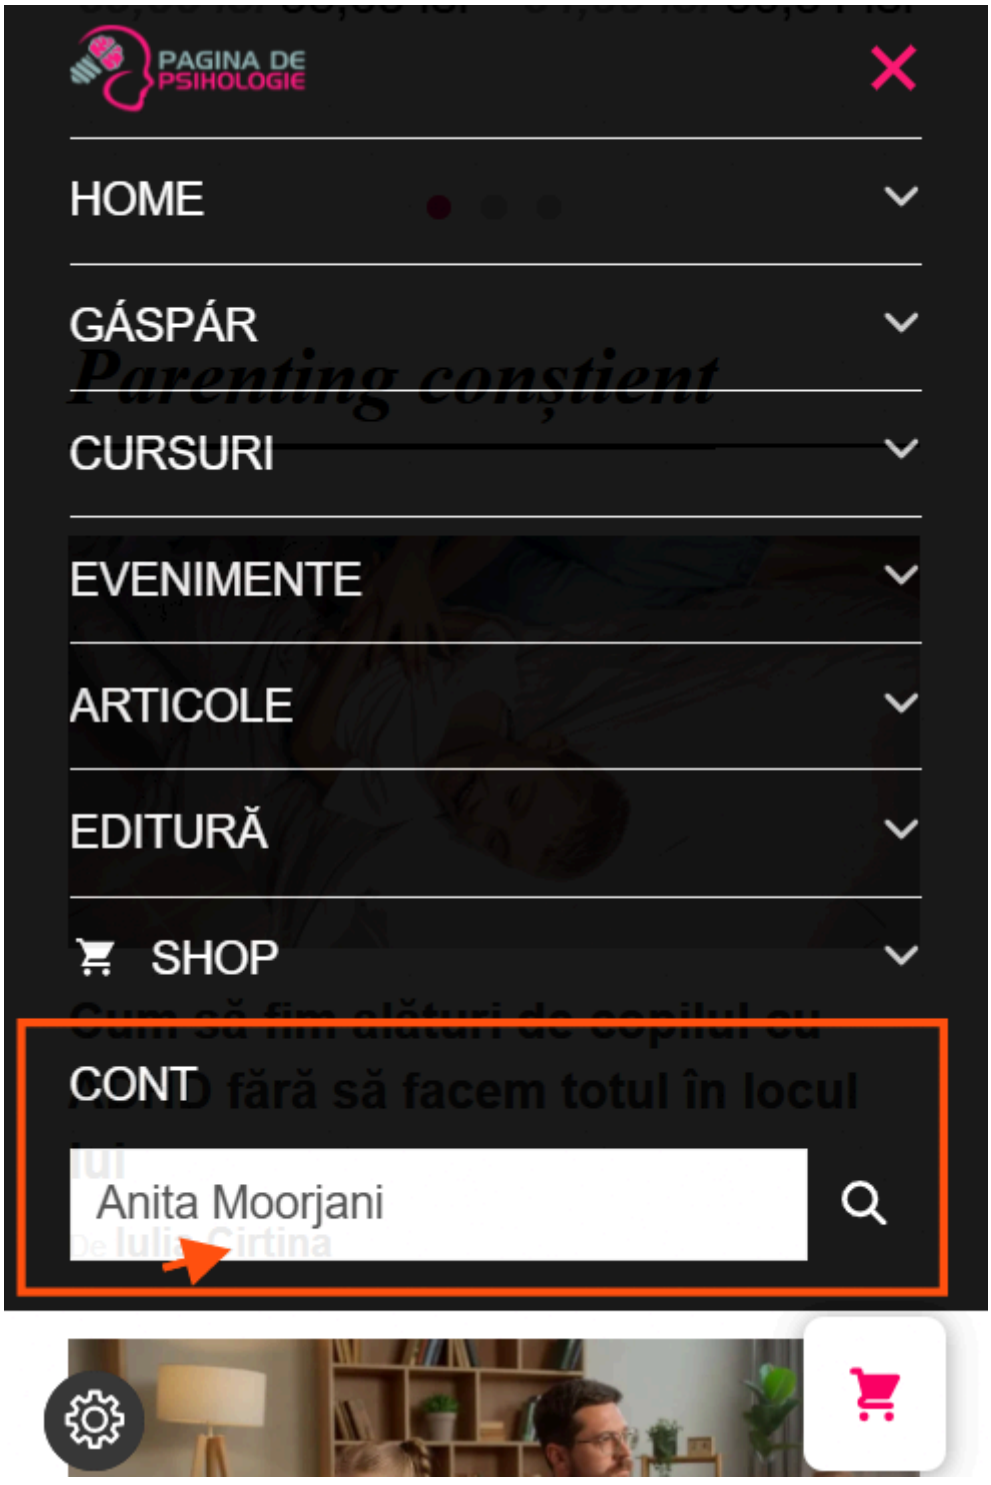

BUG 013 [Newsletter] Newsletter subscription opens raw code error message in a new tab when email field is empty 47

BUG 014 [Product Page] Invalid price value "0.00 lei" is allowed and displayed on the Product and Catalog Page when the product is non promotional 50

BUG 015 [Order Validation] Invalid price value "0.00 lei" item is allowed to be added in the Cart and complete transaction 53

BUG-001 [Burger Menu] Transparency causes text to overlap in the Search Field when Burger Menu is expanded

[Burger Menu] Transparency causes text overlap.png

PRECONDITIONS:

1. User is a guest user (not registered/logged in)
2. Home Page https://www.paginadepsihologie.ro/ is fully loaded

STEPS TO REPRODUCE:

1. Scroll -> to a wide text section
2. Click on -> Burger Icon to expand the Burger Menu
3. Click on -> Search Field
4. Type -> the search term "Anita Moorjani"
5. Observe -> the underlying Home Page text overlapping into the Search Field

INPUT VALUES: "Anita Moorjani"

EXPECTED RESULT:
Background text from the underlying pages should be completely hidden so the user can easily type/read into the Search Field.

ACTUAL RESULT:
The Burger Menu is semi-transparent. Text from the underlying pages overlaps with the typed text and causes visual confusion.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48)
- Responsive Mode (Viewport: 400x668), using Dev Tools
- Production Environment

DEVELOPER LOGS: -

PRIORITY/SEVERITY:

- **Priority: High**
  It causes a poor user experience and visual clutter of a primary element – the Search Field – across the entire website.
  It strains readability and can lead to input errors.
  Low development effort that has a big impact in increasing visual accessibility.

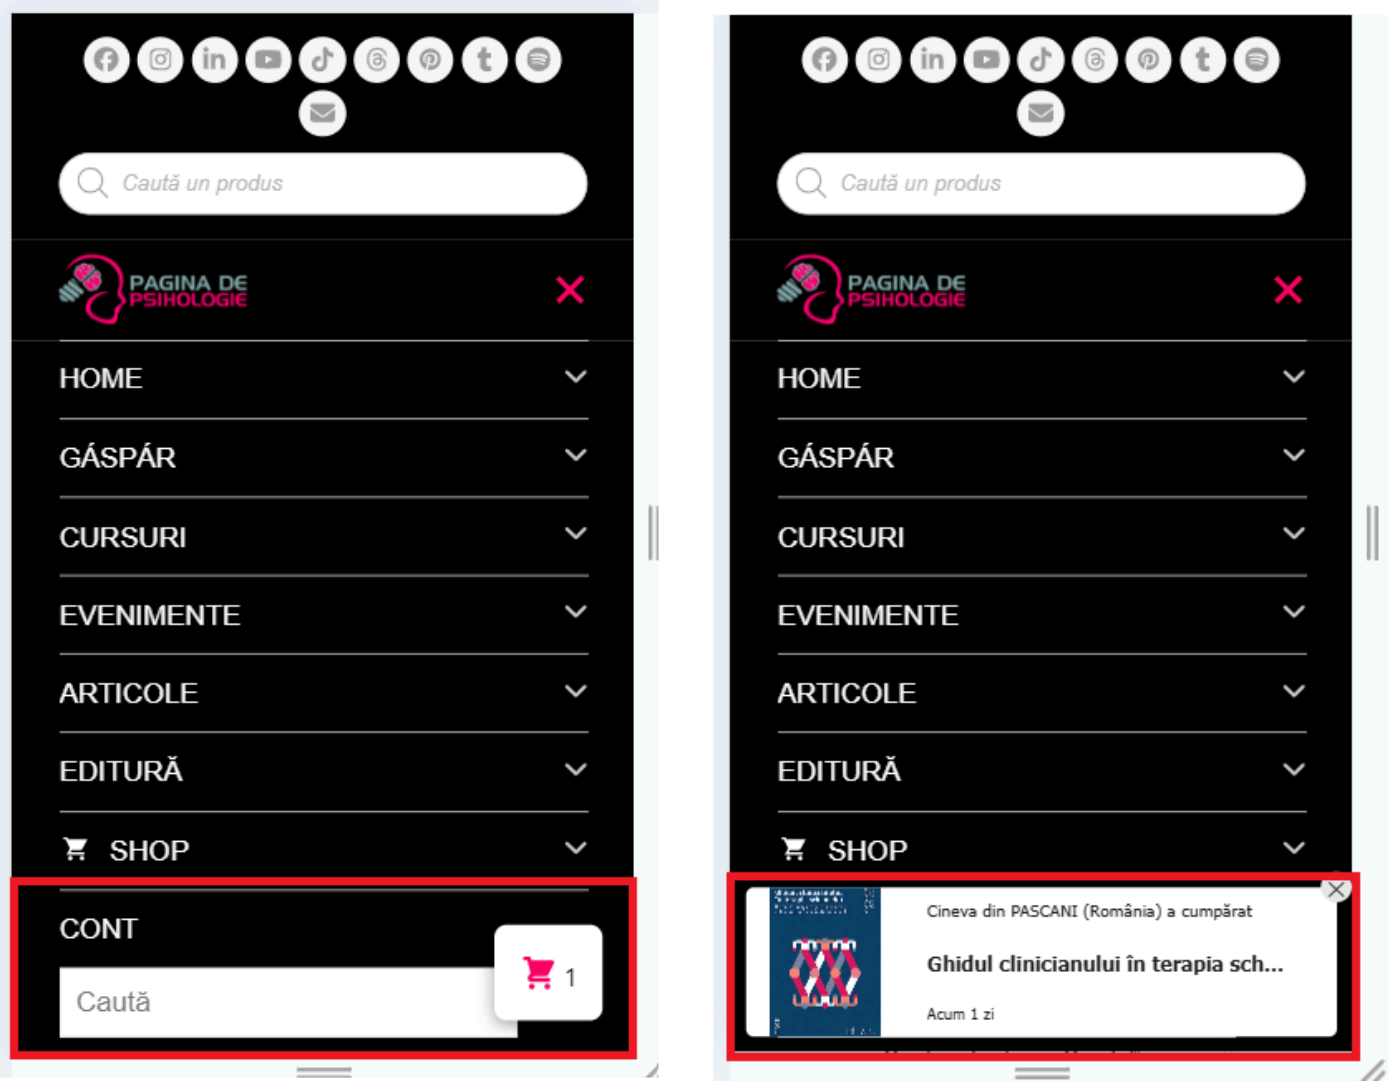

- **Severity: Low**
  The search functionality still works and the user can type in the desired text.

ADDITIONAL INFORMATION: -

ATTACHMENTS: [Burger Menu] Transparency causes text overlap.png

BUG-002 [Burger Menu] Automated Notification Message totally covers the Search Field when Burger Menu is expanded

[Burger Menu]_ notification-message_overlaps.png

PRECONDITIONS:

1. User is a guest user (not registered/logged in)
2. Home Page https://www.paginadepsihologie.ro/ is fully loaded
3. Automated Notification Message is active

STEPS TO REPRODUCE:

1. Click on -> Burger Icon to expand the Burger Menu
2. Click on -> Search Field
3. Type -> the search term "Anita Moorjani"
4. Wait -> the automated Notification Message to popup on the screen
5. Observe -> how the Notification Message covers the Search Field entirely

INPUT VALUES: “Anita Moorjani”

EXPECTED RESULT:

The Search Field must remain fully visible and completely unobstructed when automated Notification Message renders inside the viewport.

ACTUAL RESULT:

The Notification Message overlaps and completely covers the Search Field. This renders the Search Field entirely unavailable and unclickable while the popup remains active in the viewport.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools.
- Responsive Mode (Viewport: 400x668)
- Production Environment.

DEVELOPER LOGS: -

PRIORITY/SEVERITY:

- **Priority: High**
  The defect triggers across all pages when the Burger Menu is expanded and the Notification Message popups into the viewport.
  The Search Field – main element – is unavailable for the users for a short period of time (10 seconds).
  Blocking Search Field can frustrate users and increase the drop-offs.

- **Severity: High**
  The user can't type, read, and execute a search, while the popup is visible in the viewport (10 seconds).

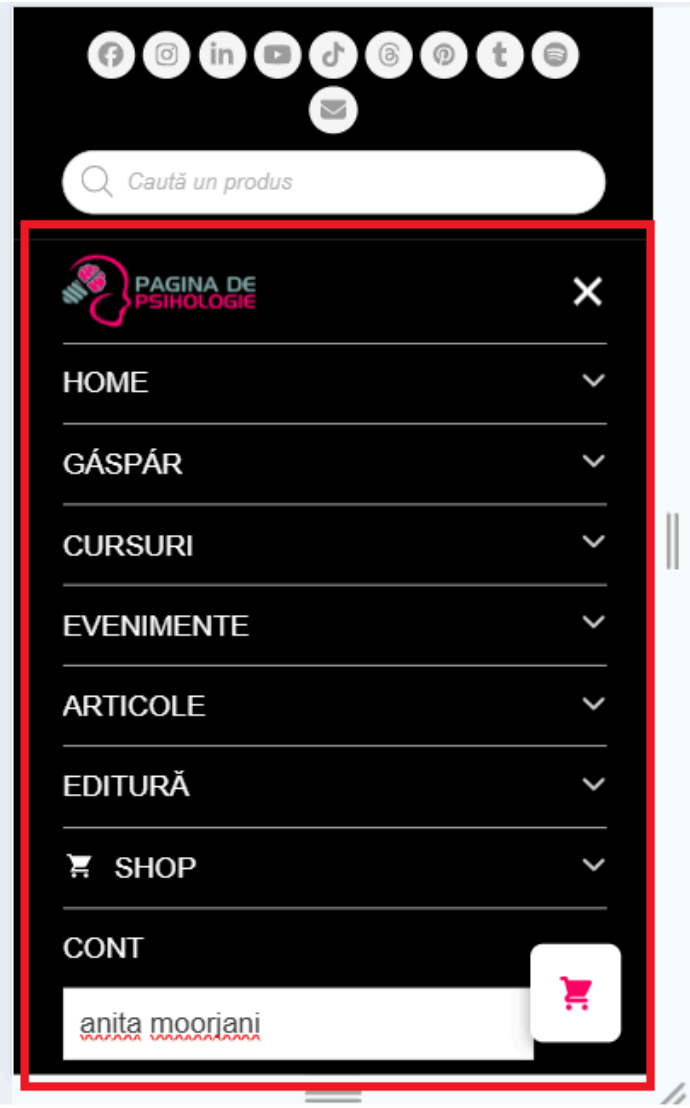

ADDITIONAL INFORMATION:

- The Notification Message automated timelines:
  - ☐ **Duration - 10 seconds** (visible in viewport)
  - ☐ **Frequency - 30 seconds** (the time between its appearances)
- This can be reproduced on any website page when the Burger Menu is opened and the Search Field is visible.
- Notification Message element class -> *.notification-message-container*

ATTACHMENTS: [Burger Menu]_ notification-message_overlaps.png

BUG-003 [Burger Menu] Notification Message close button triggers menu closing when clicked

[Burger Menu] Close button_triggers chain closing.png

PRECONDITIONS:

1. User is a guest user (not registered/logged in)
2. Home Page https://www.paginadepsihologie.ro/ is fully loaded
3. Automated Notification Message is active

STEPS TO REPRODUCE:

1. Click on -> Burger Icon to expand the Burger Menu
2. Type -> into the Search Field "Anita moorjani"
3. Wait -> the Notification Message to be visible into the viewport
4. Click on -> the Notification Message close button
5. Observe -> the Burger Menu withdrawal

INPUT VALUES: "Anita moorjani"

EXPECTED RESULT:

Clicking the close button should only dismiss the Notification Message popup.

ACTUAL RESULT:

Clicking the close button dismisses the Notification Message popup, but simultaneously triggers the close event for the entire Burger Menu.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools.
- Responsive Mode (Viewport: 400x668)
- Production Environment.

DEVELOPER LOGS:

Red JavaScript error triggered immediately upon clicking the close button:

Unable to preventDefault inside passive event listener invocation.

window.viSwipeDetect.touchsurface.addEventListener.passive @ woocommerce-notification.min.js:

PRIORITY/SEVERITY:

- **Priority**: **High**

  This issue directly impacts the core business flow: the book shopping process.

  The Burger Menu closes unexpectedly and disrupts the flow, forcing the user to re-open it to resume typing.

  This interruption and the additional steps required to complete the shopping flow cause significant user frustration.

  The Notification Message automated timelines:

  - ☐ **Duration - 10 seconds** (visible in viewport)
  - ☐ **Frequency - 30 seconds** (the distance between its appearances)

  The automated Notification Message renders in the viewport very frequently and users will repeatedly trigger this closing - reopening loop of the Burger Menu.

- **Severity**: **Medium**
  The search functionality is working as expected and after re-opening the Burger Menu the user can resume from where he was interrupted as the previous typed text remains saved in the Search Field.

ADDITIONAL INFORMATION:

- The Notification Message popup is an element displayed in every page of the Website. But the issue is isolated strictly to the interaction inside the open Burger Menu. The click listener on the active Burger Menu area seems to mistakenly capture the click event linked to the Button.
- Close button element class -> *.notify-close*
- Notification Message element class -> *.notification-message-container*

ATTACHMENTS: [Burger Menu] Close button_triggers chain closing.png

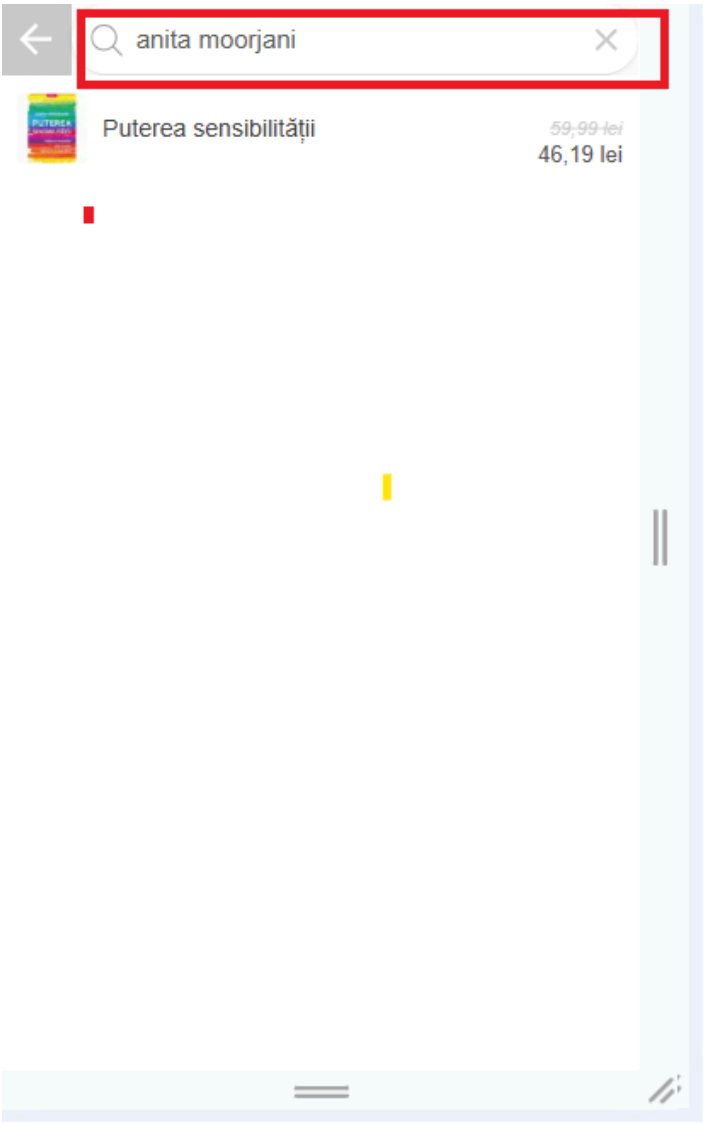

BUG-004 [Search] Mismatch between the 2 Search Fields results and the Suggestions List when searching the same product

[Search] Burger Menu search_0 result.png

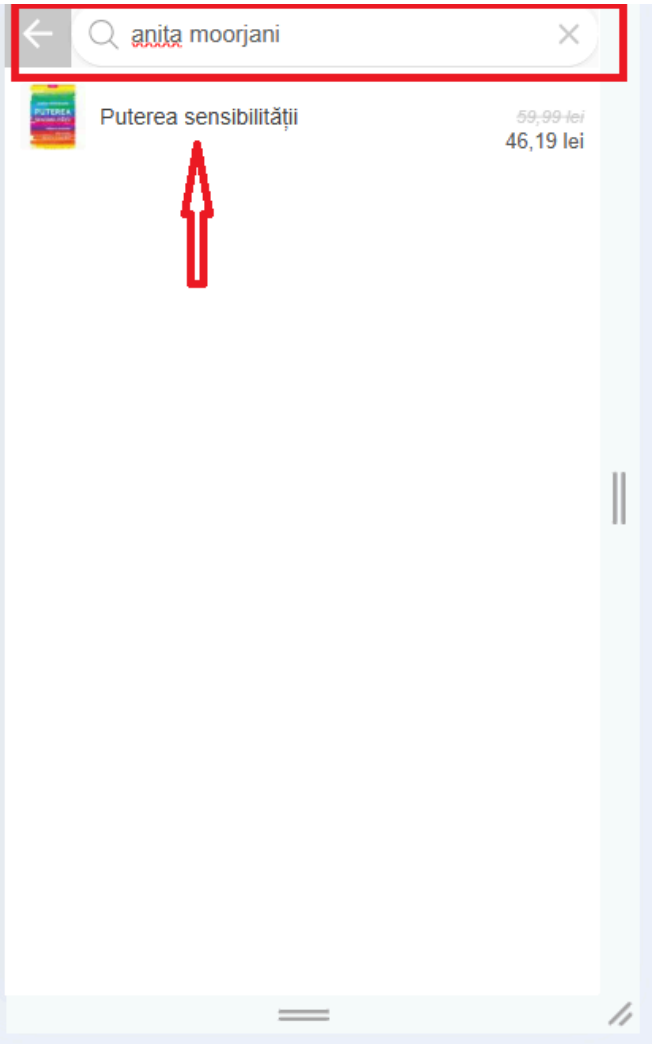

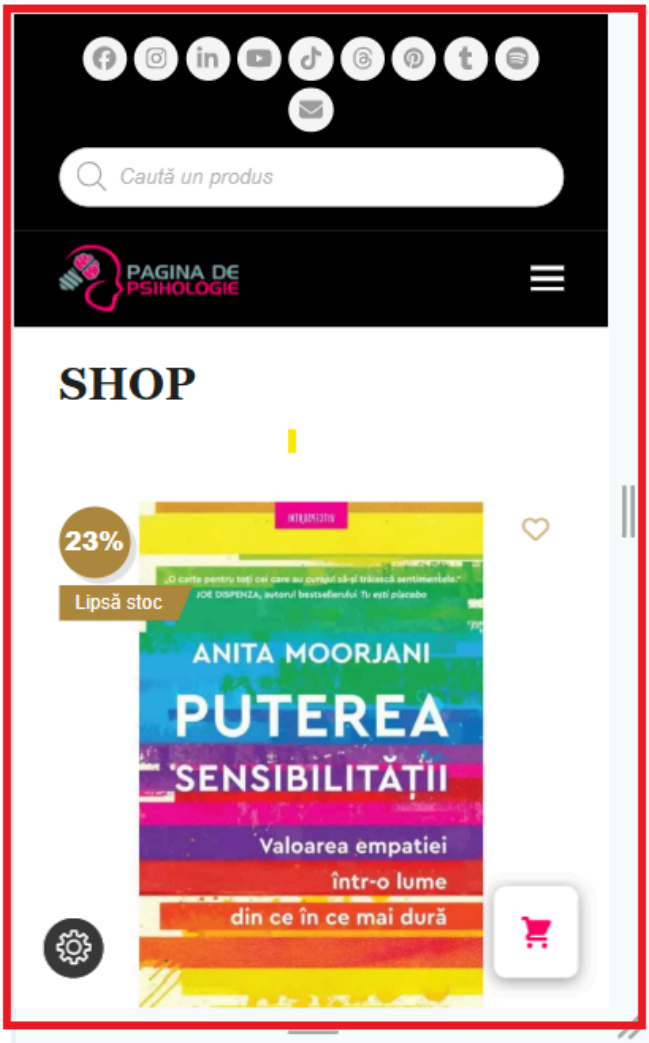

[Search] Site Header search_0 result.png

[Search] Suggestion List_1 result.png

PRECONDITIONS:

1. User is a guest user (not registered/logged in).
2. The website contains at least 1 Product Page for an ‘’Out of stock’’ book by the author "Anita Moorjani”
3. Home Page is fully loaded https://www.paginadepsihologie.ro

STEPS TO REPRODUCE:

1. Click on -> Burger Icon to expand the Burger Menu

2. Click on -> Burger Menu Search Field
3. Type -> the searched term "Anita Moorjani"
4. Press -> “Enter”
5. Observe -> the Search Results Page (https://www.paginadepsihologie.ro/?s=anita+moorjani)
6. Return -> to the Home Page
7. Type "Anita Moorjani" on -> Site Header Search Field
8. Press -> “Enter”
9. Observe the Search Results Page (https://www.paginadepsihologie.ro/?s=anita+moorjani&post_type=product&dgwt_wcas=1)
10. Click again on -> the Site Header Search Field (the typed text "Anita Moorjani" is still there) to open the Suggestion list
11. Click on -> the suggested book “Puterea Sensibilității”
12. Notice -> you are redirected to its corresponding Product Page https://www.paginadepsihologie.ro/produs/puterea-sensibilitatii/

INPUT VALUES: "Anita Moorjani"

EXPECTED RESULT:

There should be a match between the results of the 2 website Search Fields and the Suggestions List.

ACTUAL RESULT:

Both search fields return identical results:

- no book from the search author
- no redirection to its corresponding Product Page

Even though both Search Fields state that there are no products from the searched author the Suggestion List contradicts this statement by listing 1 book that belongs to the author.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools.
- Responsive Mode (Viewport: 400x668)
- Production Environment.

DEVELOPER LOGS:

Console information:

Root Cause: The search engine (TNTSearchMySQL) failed to return a match for the specific string "anita moorjani" within the filtered scope. The request URL shows the search is restricted to post_type=product; if the book is not explicitly categorized as a WooCommerce product, it will be excluded.

Suggestions:

- Check Product Type: Verify the book is published as a "Product" in WooCommerce, not just a "Post" or "Page."
- Rebuild Index: In the WordPress admin, go to the Ajax Search for WooCommerce settings and trigger an index rebuild. TNTSearch often fails to find existing items if the index is stale.
- Test Partial Queries: Try searching for just "Moorjani." If that works, the engine may be struggling with the full name or the space between words.
- Check Engine Logic: The previous aborted request for anita moorja suggests the live-search is canceling requests rapidly. Ensure the final search isn't being interrupted by subsequent background scripts.

PRIORITY/SEVERITY:

- **Priority: Medium**

  If users rely only on the 2 search fields, they will falsely assume there are no books/information from that author, abandoning the shopping process.

  The user is not redirected to the ‘’out of the stock’’ Product Page which contains valuable information (book description, book review, add to favourites etc) that could help the user to engage in a future purchase when the item is available.

- **Severity: Medium**

  Available workaround: The users that will not press ENTER in the Site Header Search Field and will directly click on the suggested book from the Suggestion List will be redirected to its Product Page.

ADDITIONAL INFORMATION:

- When clicking on the suggested book it redirects the user to its corresponding Product Page.
- The user is correctly informed that this book is “out of stock”
- Site Header element class -> *.site-header*
- **User Perspective - Why keep product pages live for "out-of-stock" books?**

- ☐ **Smarter Restocking:** Customers can add the book to their Favorites. The company can then track these lists to see which books are in high demand and **order the right amount** of stock.
- ☐ **Increase Alternative Sales:** The page **shows similar books** that are currently in stock, which encourages customers to buy an alternative instead of leaving empty-handed.
- ☐ **Builds Future Demand**: The page keeps showing valuable details (like reviews and descriptions). This **helps customers decide** if they want to buy the book as soon as it is back in stock.

2. [Search] Site Header search_0 result.png
3. [Search] Suggestion List_1 result.png

BUG-005 [Global UI] Star rating icons fail to render and display as overlapping "SSSSS" and "sssss" characters site-wide

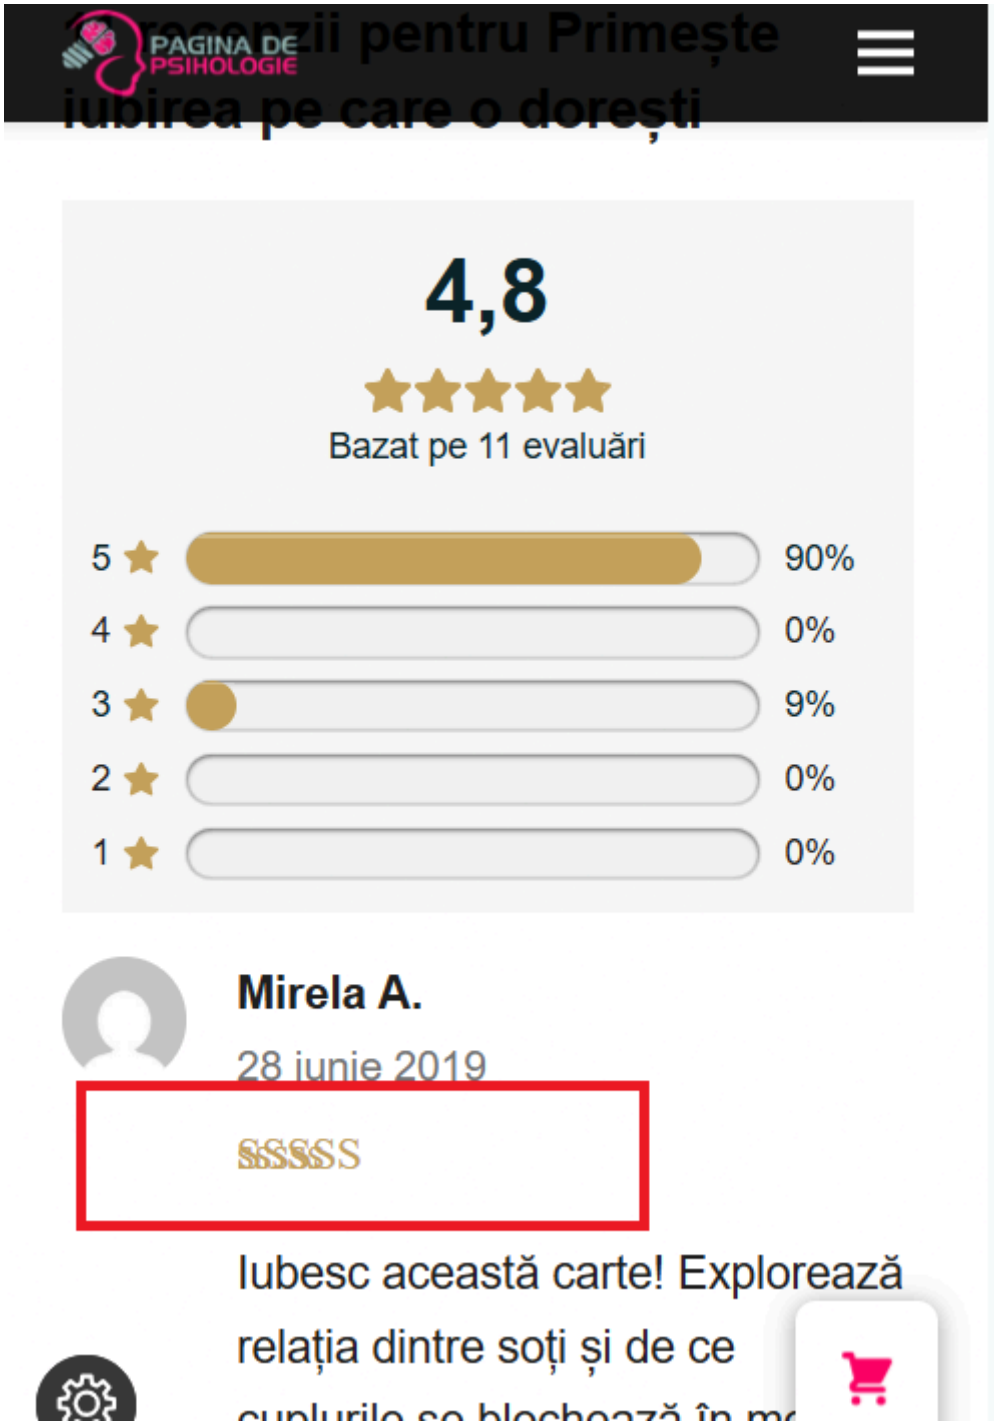

[Catalog Page]_Overlaping S.png

[Product Page]_Overlaping S_top section.png

[Product Page]_Overlapping S_reviews section.png

PRECONDITIONS:

1. The database contains products with existing user reviews and star ratings

STEPS TO REPRODUCE:

Scenario A: Catalog Page

1. Navigate to -> Any website page containing the Site Header and its corresponding Search Field
2. Type -> into the Search Field "Harville Hendrix"
3. Press -> Enter
4. Observe -> on the Catalog Page, under books titles, Overlapping "S" characters are displayed

Scenario B: Product Page (Top Section & Reviews Section)

1. Click on -> any book to open its Product Page
2. Observe -> the rating area under the book title
3. Scroll down -> to the Customer Reviews section
4. Observe -> the rating area below each user's review date

INPUT VALUES: Any valid author name (e.g., "Harville Hendrix", "Shefali Tsabary")

EXPECTED RESULT:

Graphical 5-star review icons should render clearly in all situations: Catalog Page, Product Page (top and user reviews section).

ACTUAL RESULT:

The graphical star icons are completely missing site-wide. Instead, uppercase "SSSSS" and lowercase "sssss" letters are rendered on top of each other, resulting in an overlapping text where the star icons should be.

This happens in 3 distinct locations:

1. Catalog Page (under each Book Title)
2. Product Page top section (under the Book Title)
3. Product Page reviews section (under each user's review date)

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools
- Responsive Mode (Viewport: 400x668)
- Production Environment.

DEVELOPER LOGS: -

PRIORITY/SEVERITY:

- **Priority**: **High**

  Directly affects Product presentation site-wide, affecting customers' trust.

  User Experience: From a user perspective, this visual defect damages brand credibility. The overlapping "S" characters mimic the sloppy design patterns found on fraudulent or unsafe websites.

  Transaction Friction: Because the overlapping letters resemble currency or price symbols, users could associate the error with broken pricing calculations, raising immediate anxieties regarding checkout accuracy and pushing them to seek the items on competitor websites.

  Maximum Visibility: This bug is present in 2 of the most heavily trafficked pages of the user shopping journey (Catalog Page, Product Page). The majority of the browsing users will see this error immediately.

- **Severity: Low**

  This is a user interface defect. The users can navigate on the Catalog and Product page and can easily complete the buying process.

ADDITIONAL INFORMATION:

ATTACHMENTS:

[Catalog Page]_Overlaping S.png

[Product Page]_Overlaping S_top section.png

[Product Page]_Overlapping S_reviews section.png

BUG-006 [Product Page] The total number of reviews and its corresponding text is missing for some products

[Product Page]_ Reviews Count_missing.png

PRECONDITIONS:

The website database contains the product “Terapia imago’’ by author “Harville Hendrix’’, which has existing user reviews

STEPS TO REPRODUCE:

1. Open -> Product Page:https://www.paginadepsihologie.ro/produs/terapia-imago/
2. Observe -> the total number of reviews (under the Book Title)

INPUT VALUES: -

EXPECTED RESULT:

The website should display the average score and the total number of reviews.

- Format Example: 4.96 (11 recenzii)

ACTUAL RESULT:

The website only shows the average score. The space inside the parentheses is completely empty.

- Observed Format: 4.96 ( )

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools.
- Responsive Mode (Viewport: 400x668)
- Production Environment.

DEVELOPER LOGS:

Pending backend payload inspection. (Root Cause Hint: Data binding anomaly or localized null pointer issue. The total review count variable or localized string template (%d recenzii) fails to populate or return data on specific dynamic endpoints, despite the aggregate score floating-point value being successfully queried).

PRIORITY/SEVERITY:

- **Priority**: **Low**

  High Visibility: It appears in high traffic areas - the top section of the Product Page

  Should be resolved to maintain consistent text layouts across all Product Pages.
- **Severity**: **Low**

  The bug does not prevent users from buying books, searching the catalog, or reading reviews. The Product Page and checkout flow remain unaffected.

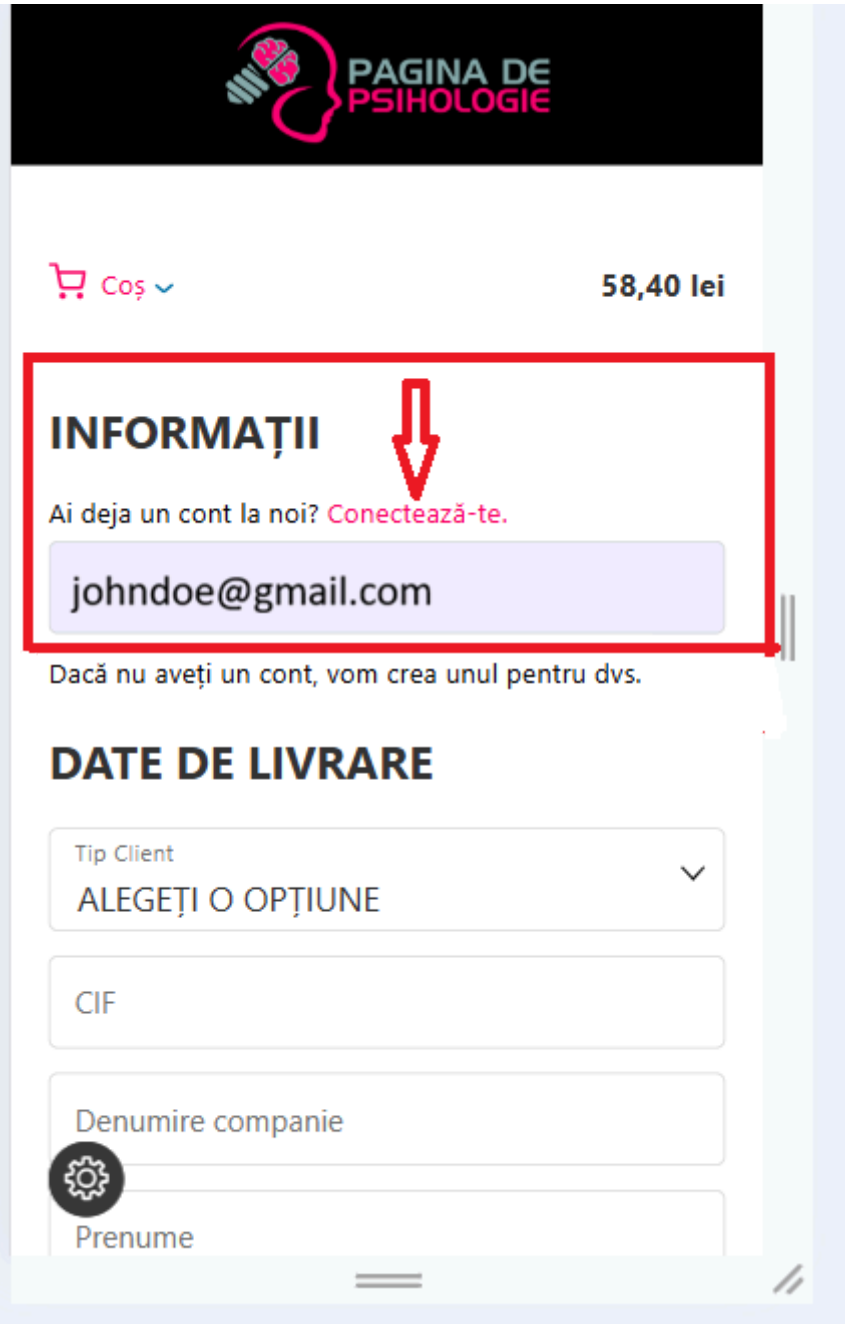

ADDITIONAL INFORMATION:

- Reproduction Rate: Out of 12 different books Product Pages tested, only 2 specific products exhibited this data omission. The remaining 10 pages successfully displayed the reviews count text (e.g., 4.96 (11 recenzii)).

ATTACHMENTS: [Product Page]_ Reviews Count_missing.png

BUG-007 [Checkout Form] ‘’Conecteza-te’’ anchor link doesn’t redirect to Login Page when clicked

[Checkout Form]_Conecteza-te link_doesn’t redirect.png

PRECONDITIONS:

1. User is a guest user (not registered/logged in).

2. The selected products are in stock books

STEPS TO REPRODUCE:

1. Home Page -> Scroll down to the Shop Section (https://www.paginadepsihologie.ro/)
2. Click on -> black Cart Icon
3. Select -> any book from the Catalog Page list
4. Click on -> the black Cart icon to add the book
5. Check -> the number of items in the cart to confirm it was added
6. Click on -> the Button “Spre Finalizarea Comenzii” to open Checkout Form Page (verificare-comanda)
7. On the “Informații” Section -> click on the red anchor link “Conectează-te”
8. Observe -> if any action is triggered

INPUT VALUES: -

EXPECTED RESULT:

Clicking on the anchor link “Conecteaza-te” should redirect the user to “Contul meu” Page, where entering a valid email and password should allow the user to successfully authenticate.

ACTUAL RESULT:

Clicking on the anchor link “Conecteaza-te” doesn’t redirect the user to the “Contul meu” Page. No event is triggered upon clicking the link. No message, no redirection the page remains the same, nothing changes.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools
- Responsive Mode (Viewport: 400x668)
- Production Environment

DEVELOPER LOGS:

Console: Red Error

checkout.js:1 Uncaught TypeError: Cannot read properties of undefined (reading 'call')
at a (checkout.js:1:320357)
at 1714 (checkout.js:1:244762)
at a (checkout.js:1:320357)
at 8270 (checkout.js:1:11239)
at a (checkout.js:1:320357)
at 6637 (checkout.js:1:142589)
at a (checkout.js:1:320357)
at 1593 (checkout.js:1:1245)
at a (checkout.js:1:320357)
at checkout.js:1:325143

PRIORITY/SEVERITY:

- **Priority: High**
  Blockage in the Purchase Funnel: While a workaround exists, it requires the user to know it's there. Many users which already have an account will click the primary "Conecteaza-te" link, assume the site is broken, and leave the book shopping process without opening the Burger Menu.

  Increase Cognitive Load: Customers are forced to take extra steps (click twice on Back Button -> the user is redirected Cart Page -> has to click again on Back Button to be able to access the Burger Menu -> click on Burger Menu -> click on “Cont” to be redirected on the “Contul meu” Page) to perform a basic action like logging in. There are a lot of extra steps and they are not intuitive.

  Interrupts and adds complexity to the Placing Order flow.

  High-Traffic Element: Authentication links are high-visibility components. Even with a workaround, leaving a broken primary link active on the UI damages brand trust and suggests a lack of quality control.

- **Severity: High**
  Failure to trigger an event and a Red console error.
  Broken Primary Element: The anchor link itself is completely non-functional (dead link). A primary entry point for a critical path is still broken, which represents a major layout and navigation failure.
  Workaround Available: Because the user can still access the "Contul meu" page through the Burger Menu, the Login Functionality is not broken site-wide. The core database and authentication APIs are still functional.

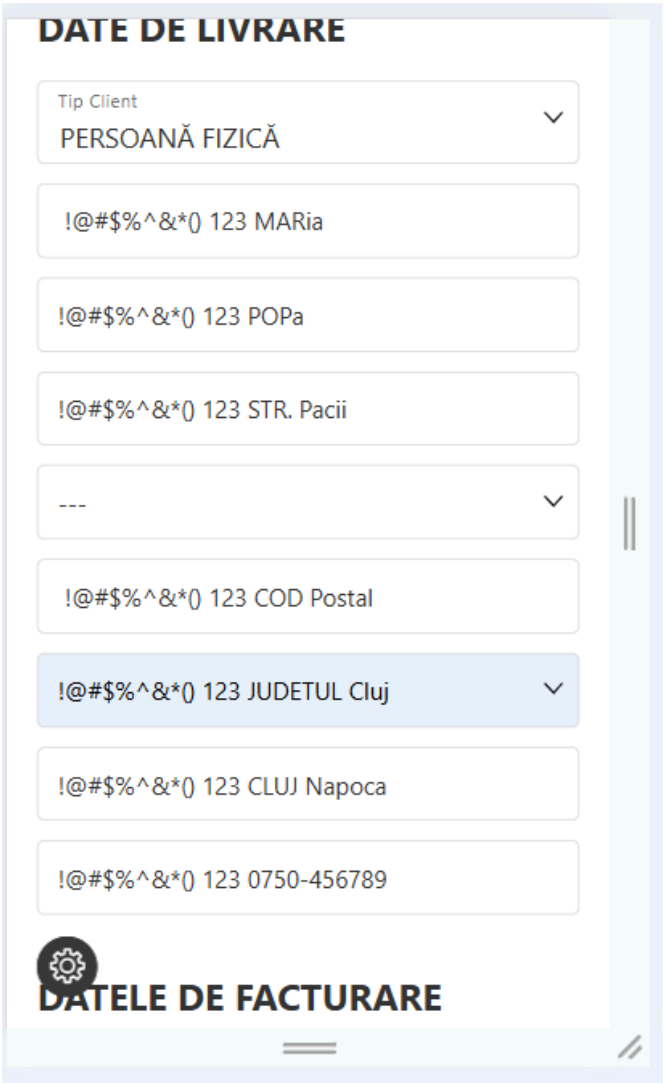

ADDITIONAL INFORMATION: -

ATTACHMENTS:

[Checkout Form]_Conecteza-te_link doesn’t redirect.png

BUG-008 [Checkout Form] Missing error messages for some fields when user types invalid data

[Checkout Form]_Missing error messages.png

PRECONDITIONS:

1. User has 1 item in the shopping cart
2. User is on the Checkout Form page: https://www.paginadepsihologie.ro/verificare-comanda/

STEPS TO REPRODUCE:

1. Enter -> invalid data (below table) into the form fields
2. Check -> "La fel ca datele de livrare" box
3. Click on -> the "Finalizare comanda" Button
4. Observe -> the validation error messages displayed for each field.

INPUT VALUES:

	CHECKOUT FORM INVALID DATA TEST	**ERROR MESSAGES**
	INFORMATII	
1	**Adresa email**: unfilled	"**Facturare Adresa de email** este un camp obligatoriu."
	DATE DE LIVRARE	
2	**Tip Client:** Persoana Fizica	Checked
3	**Prenume:** !@#$%^&*() 123 MARia	Missing error message
4	**Nume:** !@#$%^&*() 123 POPa	Missing error message
5	**Adresa:** !@#$%^&*() 123 STR. Pacii	Missing error message
6	**Tara**: ----	" "---" nu este cod de tara valid."
7	**Cod Postal:** !@#$%^&*() 123 COD Postal	"**Facturare Cod postal** nu este cod postal/ZIP valid"
7		"**Livrare Cod postal** nu este cod postal/ZIP valid''

8	**Judet**: !@#$%^&*() 123 JUDETUL Cluj	Missing error message
9	**Localitate/Sector:** !@#$%^&*() 123 CLUJ Napoca	Missing error message
1	**Telefon:** !@#$%^&*() 123 0750-456789	"**Facturare Telefon** nu este un numar de telefon valid."
1		"**Livrare Telefon** nu este un numar de telefon valid.

EXPECTED RESULT:

When entering invalid data in the Checkout Form an error message should be displayed for each field indicating the error.

ACTUAL RESULT:

When entering invalid data in the Checkout Form:

There is no error message displayed for each field after its completion.

Missing error messages:

1. "Prenume''
2. "Nume"
3. "Adresa"
4. "Judet"
5. ''Localitatea"

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools.
- Responsive Mode (Viewport: 400x668)
- Production Environment.

DEVELOPER LOGS:

Console message Red Javascript error

checkout.js:1 Uncaught TypeError: Cannot read properties of undefined (reading 'call')

at a (checkout.js:1:320357)
at 1714 (checkout.js:1:244762)
at a (checkout.js:1:320357)
at 8270 (checkout.js:1:11239)
at a (checkout.js:1:320357)
at 6637 (checkout.js:1:142589)

at 1593 (checkout.js:1:1245)
at a (checkout.js:1:320357)
at checkout.js:1:325143

PRIORITY/SEVERITY:

- **Priority: High**

  Affects revenue: Checkout is the most important stage on the purchase funnel. If users submit invalid data (like typos in their name, address, city) orders will either fail to process or ship to incorrect locations creating financial losses and high overhead for customer support.

  Lack of key information: Correct user details (name, surname, and full address) are critical to ensure successful product delivery.

  Increases the drop-off risk : a non-intuitive and difficult Checkout Form can cause users to abandon their order.

- **Severity: Medium**

  Red Javascript error is logged in the console.

  Invalid data: The system lets users type invalid data into critical fields (“Prenume’’, “Nume”, “Adresa” etc) without alerting them. This forces the frontend to either submit bad data to the server or block the user silently at the final check.

  Inconsistent data validation : some fields from the Checkout Form show error messages but 5 fields don’t.

ADDITIONAL INFORMATION:

ATTACHMENTS: [Checkout Form]_Missing error messages.png

BUG-009 [Checkout Form] The hidden "Livrare Cod postal" and "Livrare Telefon" fields still trigger validation errors when "La fel ca datele de livrare" box is checked

[Checkout Form] Hidden fields trigger validation errors.png

PRECONDITIONS:

1. User has 1 item in the shopping cart
2. User is on the Checkout Form page: https://www.paginadepsihologie.ro/verificare-comanda/

STEPS TO REPRODUCE:

1. Enter -> invalid data (below table) into the form fields
2. Check -> "La fel ca datele de livrare" box

3. Click on -> the "Finalizare comanda" Button
4. Observe -> the validation error messages displayed for the Shipping Details fields: ''Livrare cod postal'' and ''Livrare telefon''

INPUT VALUES:

	CHECKOUT FORM INVALID DATA TEST	**ERROR MESSAGES**
	INFORMATII	
1	**Adresa email**: unfilled	"**Facturare Adresa de email** este un camp obligatoriu."
	DATE DE LIVRARE	
2	**Tip Client:** Persoana Fizica	Checked
3	**Prenume:** !@#$%^&*() 123 MARia	Missing error message
4	**Nume:** !@#$%^&*() 123 POPa	Missing error message
5	**Adresa:** !@#$%^&*() 123 STR. Pacii	Missing error message
6	**Tara**: ----	" "---" nu este cod de tara valid."
7	**Cod Postal:** !@#$%^&*() 123 COD Postal	"**Facturare Cod postal** nu este cod postal/ZIP valid"
7		''**Livrare Cod postal** nu este cod postal/ZIP valid''
8	**Judet**: !@#$%^&*() 123 JUDETUL Cluj	Missing error message
9	**Localitate/Sector:** !@#$%^&*() 123 CLUJ	Missing error message

	Napoca	
1	**Telefon:** !@#$%^&*() 123 0750-456789	“**Facturare Telefon** nu este un numar de telefon valid.”
1		“**Livrare Telefon** nu este un numar de telefon valid.

EXPECTED RESULT:

When "La fel ca datele de livrare" box is checked, no error messages should be displayed for the hidden Shipping Details fields: “Livrare Cod postal” and “Livrare Telefon”.

ACTUAL RESULT:

When the "La fel ca datele de livrare" box is checked, Shipping Details fields are not displayed in the Form and are not accessible for the user to fill them in (this is the normal behaviour). But the errors messages are displayed for these hidden fields after clicking on “Finalizare comanda’’ Button:

- ‘’Livrare Cod postal”
- “Livrare Telefon”

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools.
- Responsive Mode (Viewport: 400x668)
- Production Environment.

DEVELOPER LOGS:

Console message Red Javascript error

checkout.js:1 Uncaught TypeError: Cannot read properties of undefined (reading 'call')

at a (checkout.js:1:320357)
at 1714 (checkout.js:1:244762)

at 1593 (checkout.js:1:1245)
at a (checkout.js:1:320357)
at checkout.js:1:325143

PRIORITY/SEVERITY:

- **Priority: High**

  This issue must be fixed as soon as possible because it **impacts the primary user flow:** Purchasing Books.

  User Confusion: The interface informs the user that errors exist for fields they cannot see or interact with. This leaves the user with no intuitive path forward, maximizing cart abandonment rates.

- **Severity: Medium**

  Red Javascript error is logged in the console.

  The system requires input for fields that it has physically hidden from the screen.

  For the users that fill in the correct information that doesn't trigger error messages the Checkout Form is functionable and allows the users to successfully place the order.

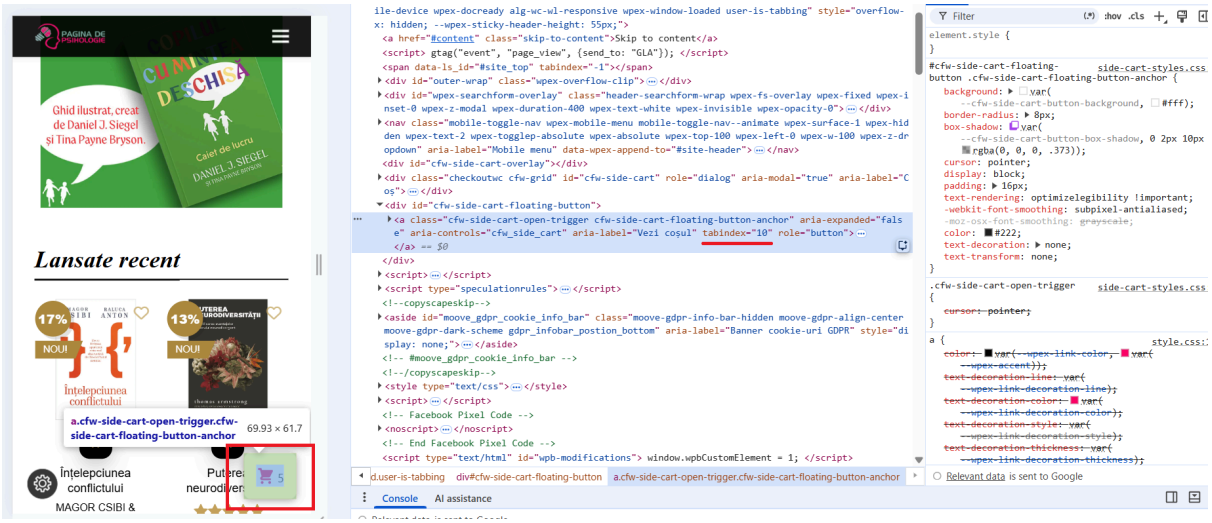

ADDITIONAL INFORMATION:
[Checkout Form] Hidden fields trigger validation errors.png

BUG 010 [Audit][Cart Icon] Floating Cart Icon triggers audit failure due to positive tabindex value

[Cart Icon]_PSI_invalid tab index.png

[Cart Icon]_Console_invalid tab index.png

PRECONDITIONS:

1. Analyze function on the Website https://pagespeed.web.dev/ is available to run an audit on the URL https://www.paginadepsihologie.ro/
2. The red floating Cart Icon is rendered on the viewport

STEPS TO REPRODUCE:

1. Navigate -> to the website Home Page (https://www.paginadepsihologie.ro/)
2. Right-click -> the red floating Cart Icon and select "Inspect" to open Developer Tools
3. Check -> HTML attributes of the Cart Icon element *‘’<a class="cfw-side-cart-open-trigger cfw-side-cart-floating-button-anchor"*
4. Navigate -> to the website https://pagespeed.web.dev/
5. Paste -> the URL https://www.paginadepsihologie.ro/ into the Analyze field
6. Click -> on Analyze button
7. Scroll down -> to section “Agent Accessibility”
8. Observe -> the audit result: "Elements should not have tabindex greater than zero"

INPUT VALUES: None

EXPECTED RESULT:

For the Cart Icon element should be used a different ‘’tabindex’’ value which allows the browser to calculate the focus order naturally based on its position in the DOM (Document Object Model).

ACTUAL RESULT:

The Cart Icon element has a hardcoded ‘tabindex="10"’ in the HTML structure, which violates WCAG accessibility guidelines and triggers a Google PageSpeed audit failure – "Elements should not have tabindex greater than zero".

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools.
- Responsive Mode (Viewport: 400x668)
- Production Environment.

PRIORITY/SEVERITY:

- **Priority: Medium**

  Negatively impacts accessibility metrics, audit scores and compromises WCAG compliance.

- **Severity: Medium**

  No Functionality Loss: When the assistive technologies are not used the users can easily click the Cart Icon. Cart Icon functions correctly, on click it opens the Cart Drawer providing users with a quick overview of their selected items.

  Disorienting experience for keyboard-only users: It disrupts keyboard navigation. A keyboard user will be forced to jump to the Cart Icon unexpectedly before navigating the rest of the page layout organically.

ADDITIONAL INFORMATION:

- **Console information**

Hardcoding positive integers for `tabindex` makes the page navigation fragile. If a developer adds a new interactive element earlier in the DOM, the keyboard navigation flow will break because the number 10 remains frozen in the code.

BUG 011 [Audit] [Homepage] Book Icon link lacks descriptive text when keyboard-focused

[Home Page] Book Icon_missing descriptive name.png

[Homepage] Book Icon_PSI_audit fail.png

PRECONDITIONS:

1. Analyze function on the Website https://pagespeed.web.dev/ is available to run an audit on the URL https://www.paginadepsihologie.ro/

STEPS TO REPRODUCE:

1. Navigate -> to Home Page (https://www.paginadepsihologie.ro/)
2. Right-click -> the black floating Book Icon (above "EDITURĂ" text)
3. Click "Inspect" -> to open DevTools and see the selected highlighted element
4. Look above -> at its parent, an anchor element << a href = "https://www.paginadepsihologie.ro/editura-pagina-de-psihologie/" class="wpex-no-underline" >>
5. Navigate -> to the website https://pagespeed.web.dev/
6. Paste -> the URL https://www.paginadepsihologie.ro/ into the Analyze field
7. Click -> on Analyze button
8. Scroll down -> to section "Agent Accessibility"
9. Observe -> the audit result: "Links must have discernible text''
10. Turn on -> the screen reader
11. Press -> Tab key on your keyboard to navigate sequentially down the Home Page
12. Observe -> the focus highlight and audio feedback when reaching the Book Icon and its corresponding "EDITURA" text.

INPUT VALUES: None

EXPECTED RESULT:

Links must have informative text so that visually impaired users hear a clear description when they navigate using the Tab key.

The goal is to ensure users understand exactly where a link will take them.

To achieve this, it is best practice, according to WCAG documentation, to provide **descriptive names or context** for all links.

ACTUAL RESULT:

On Home Page:

- When accessing the Book Icon with the Tab key, a visually impaired user hears -> "Link"

- When accessing the complementary text “EDITURA” with the Tab key, a visually impaired user hears -> << Heading level 2 “Link Editura’’ >>

Hearing just “Link” doesn’t provide any useful information for the visually impaired uses.

Furthermore, it causes confusion, making the user wonder “What link is this?’’, “Where does this link redirect me?’’.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools.
- Responsive Mode (Viewport: 400x668)
- Production Environment.

PRIORITY/SEVERITY:

- **Priority: Medium**
  Creates confusion for the assistive technologies users. Negatively impacts accessibility metrics and audit scores.

- **Severity: Low**
  The link is easily accessible when the screen readers are not used. Both the text and the icon redirect to the correct page.

ADDITIONAL INFORMATION:

- **User experience when using a screen reader:**

the Book Icon and the text "EDITURA" are two **separate keyboard tab stops** that redirect to the exact **same page** https://www.paginadepsihologie.ro/editura-pagina-de-psihologie/

- **The Risk of an Incorrect Fix (Why simple labeling may not be the solution):**

Please note that simply adding an accessible name to the Book Icon link will cause the screen reader to **repeat** the same information twice in a row ("Link, Editura" followed immediately by "Link, Editura"), creating a repetitive and poor user experience.

- **Best practice:**

Visually impaired users **navigating via keyboard** should only encounter **1 single**, clear announcement for the “Editura” Page.

When pressing the Tab key, the screen reader should focus on the descriptive "EDITURA" text **without forcing the user to stop or listen to duplicate information**.

- **Documentation: WCAG 2.4.4 – Link Purpose**

https://www.w3.org/WAI/WCAG22/Understanding/link-purpose-in-context.html

BUG-012 [Audit][Product Page] Informative book cover image relies only on AI ability to extract text title from the picture when using screen readers

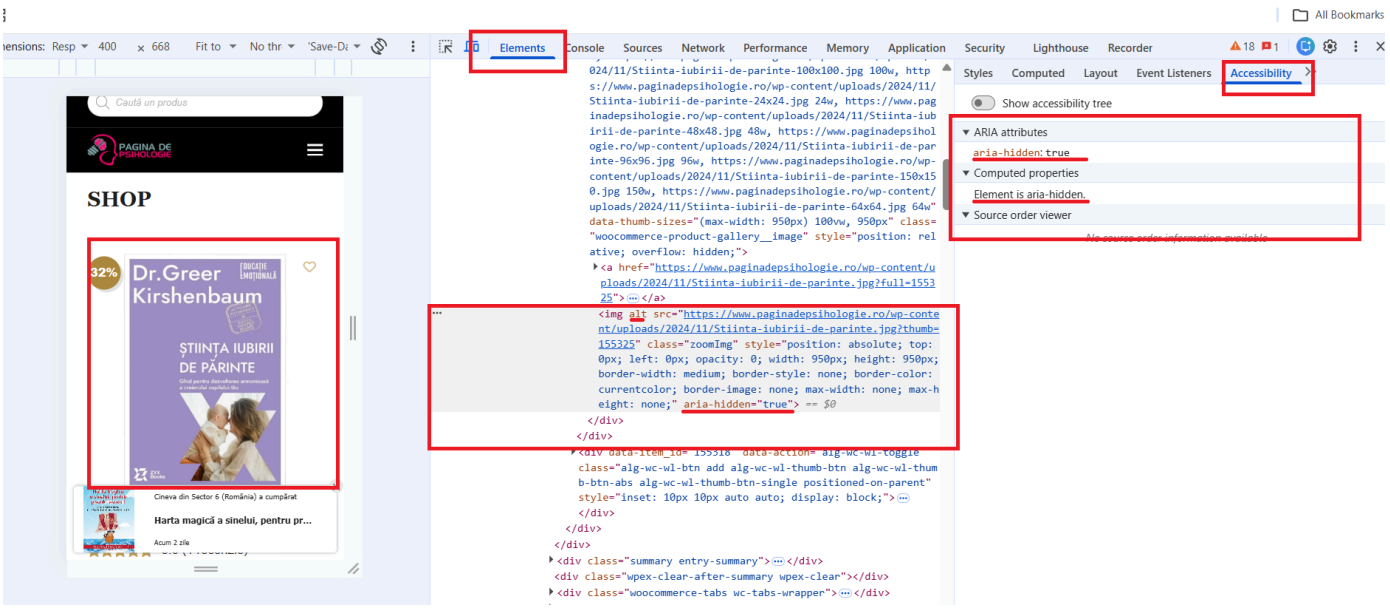

[Product Page]_missing_alt attribute_devtools.png

[Product Page]_missing_alt attribute_PSI.png

[Product Page]_accessibility tree_hidden.png

PRECONDITIONS:

1. “Viata in doi cand suntem trei” Product Page is fully loaded (https://www.paginadepsihologie.ro/produs/viata-in-doi-cand-suntem-trei-2/)
2. The Book Cover image is displayed in the viewport

STEPS TO REPRODUCE:

1. Right-click -> the Book Cover image
2. Select -> Inspect to open DevTools
3. Observe -> the “alt’’ and ‘’aria-hidden’’ attributes in the HTML tree
4. Switch -> to Accessibility Tab in Developer Tools and view the Computed Properties "Element is aria-hidden"
5. Navigate -> to the website https://pagespeed.web.dev/ to execute the audit
6. Paste -> the URL https://www.paginadepsihologie.ro/ into the Analyze field
7. Click -> on Analyze button
8. Scroll down -> to section “Names and Labels”
9. Observe -> the audit result: “Image elements do not have [alt] attributes. Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute.’’
10. Activate -> a screen reader (e.g., Windows Narrator)

11. Press -> Tab key on your keyboard to navigate sequentially down the Product Page (https://www.paginadepsihologie.ro/produs/viata-in-doi-cand-suntem-trei-2/)
12. Observe -> the focus highlight and audio message when reaching “Viata in doi cand suntem trei’’ Book Cover

INPUT VALUES: book “Viata in doi cand suntem trei’’

EXPECTED RESULT:

The Book Cover image element must provide descriptive alternate text (e.g. "Coperta cărții Viața în doi când suntem trei de Dr. John M. Gottman") so it is accessible to assistive technologies.

Because a Book Cover is an important informative element in a store, it must be natively exposed to the accessibility layer.

ACTUAL RESULT:

The Screen Reader

- When using a screen reader the user hears: ‘’Graphic” and then the book title “Viata in doi cand suntem trei’’.And this is the normal behaviour for assistive technology to read aloud the book title, as it is an important and valuable information for the user.

- But looking at both HTML code and Audit result it is clear that the book title is not picked up by the screen reader from the code, because it is missing.

  The screen reader AI integrated function extracted the text from the book cover image.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools.
- Responsive Mode (Viewport: 400x668)
- Production Environment.

DEVELOPER LOGS:

The Accessibility Tree marks the element as **"Ignored"** with the computed message **"Element is aria-hidden"**. Meaning the code instructs the screen reader to ignore and not read that image.

PRIORITY/SEVERITY:

- **Priority : Medium**

  Fails compliance rules because informative text is treated as decorative.

  It increases the risk that important information, like the book title and author name, will not be available to assistive technology users.

- **Severity : Low**

  In this case the screen reader offers the correct information and the end user is not impacted.

  However it is best practice (according to WCAG guidelines) to add descriptive [alt] text to the code as cover images often contain mixed fonts or texts that AI features might misinterpret. Clear descriptions eliminate reading errors and avoid sharing irrelevant information with the user.

ADDITIONAL INFORMATION:

- **The Audit:** PageSpeed Insights throws an explicit failure:

“Image elements do not have [alt] attributes

Informative elements should aim for **short, descriptive alternate** text. Decorative elements can be ignored with an empty alt attribute.

Failing elements:

div#message-purchased > div.message-purchase-main > a.wn-notification-image-wrapper > img.wn-notification-image

<img class="wn-notification-image" src="https://www.paginadepsihologie.ro/wp-content/uploads/2014/07/Viata-in-doi-...">.’’

BUG 013 [Newsletter] Newsletter subscription opens raw code error message in a new tab when email field is empty

[Newsletter] Raw code_error message.png

PRECONDITIONS: -

STEPS TO REPRODUCE:

1. Navigate -> to Blog Page (https://www.paginadepsihologie.ro/category/blog/)
2. Click -> the first article title to open its Article Page
3. Scroll down -> to section “Abonare Newsletter’’
4. Leave -> the field Email empty
5. Click -> “Ma abonez’’ Button
6. Observe -> the code language error message that opens in a new tab

INPUT VALUES: None

EXPECTED RESULT:

- The user interface should display user-friendly, comprehensible error messages.

  The user interface must never display technical code that could compromise database security.
- All pages should have descriptive URLs.

ACTUAL RESULT:

- The raw code is exposed directly to the user interface:

<< {"success":false,"errors":{"EMAIL":"Informațiile furnizate sunt invalide. Te rog verifică formatul câmpului și încearcă din nou."}} >>

- The Message Error page has an incomprehensible URL << https://9ec7f892.sibforms.com/serve/MUIFAP5Fdihh4nHTdu-e2NYNPczZQ7ocAMIeed9xWtTPPLDNFlOd2a4YbBU5fazUgLFWxx7jjlIHVqEZeDK5iuc7GF2Gjzh7K6fxO_pc5orUyF-qqLBZDeKrxbOGMhW5E-UukuaBp-ra6L-AsaTGrw7unqr5HO_jGorft4oegIn1BKsPfPdFZrTX283lvg-6hBtT-d_C3_Res_BCLQ== >>.

  This creates a poor experience for screen-reader users, as they are forced to listen to a long, non-descriptive URL.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools.
- Responsive Mode (Viewport: 400x668)
- Production Environment.

PRIORITY/SEVERITY:

- **Priority**: **High**

  Redirecting a user to a completely different domain (sibforms.com) with an incomprehensible URL and raw code causes deep confusion. It greatly affects the user trust as this display resembles malicious redirects and broken websites.

  It increases the drop-off rate for newsletter signups.

  For visually impaired users, forcing a screen reader to read raw code ({ } : " ") alongside a 100+ character of an external URL, makes the error message completely unhelpful and inaccessible to them.

- **Severity**: **High**

  Displaying raw code ({"success":false,"errors":{"EMAIL":...}}) directly to the user exposes the database parameter keys, increasing the risk of mapping out the backend data structure.

ADDITIONAL INFORMATION:

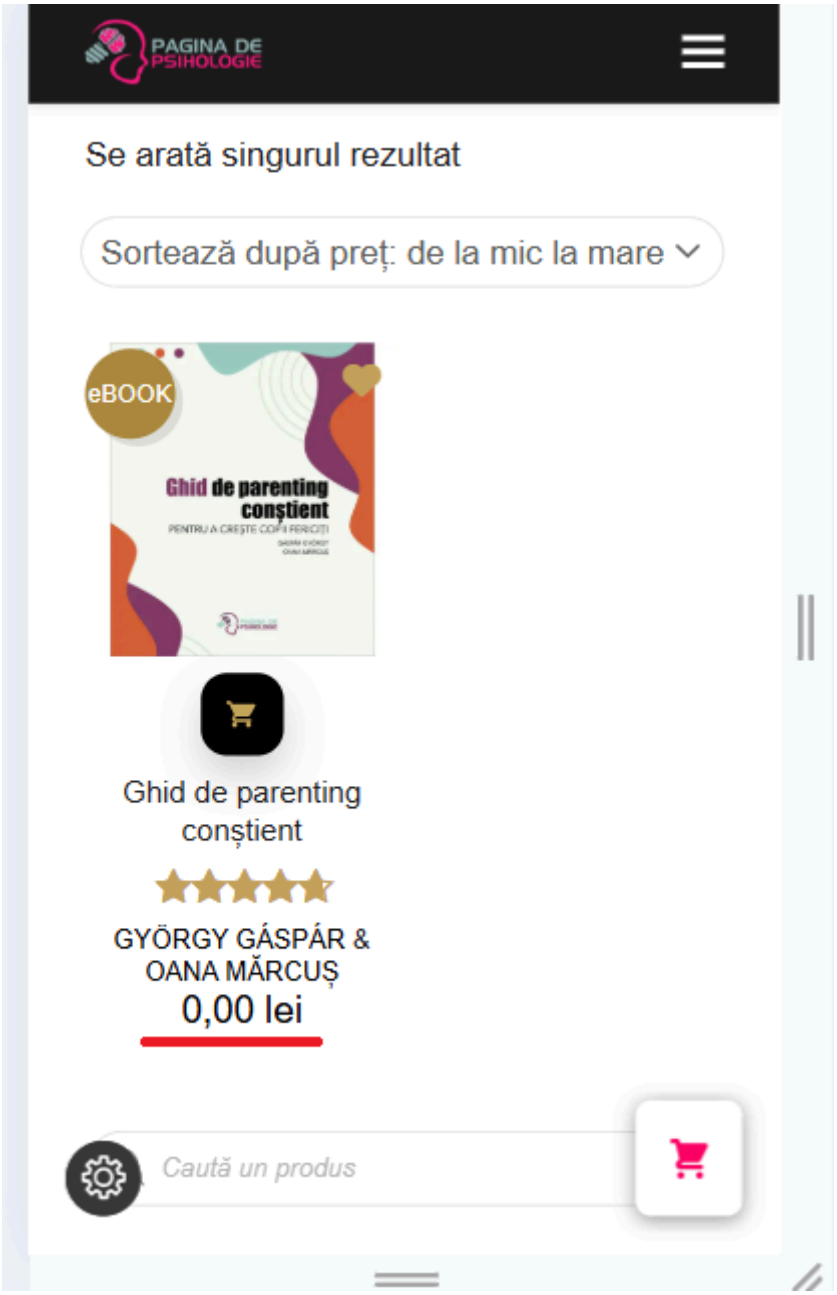

- Clicking the “Ma abonez’’ Button opens an error message in a new tab, which creates confusion for the user. This adds unnecessary complexity to navigation, as the user must return to the previous page to enter a valid email address.

- For a smoother and more intuitive flow, it is recommended to display the error message on the same page, directly next to the field containing the invalid data.

ATTACHMENTS: [Newsletter] Raw code_error message.png

BUG 014 [Product Page] Invalid price value "0.00 lei" is allowed and displayed on the Product and Catalog Page when the product is non promotional

[Product Page] Price set to 0.png

PRECONDITIONS:

1. The item ‘’Ghid de parenting constient’’ exists in the database and has assigned the price ‘’0.00 lei’’.

STEPS TO REPRODUCE:

1. Type in -> Site Header Search Field the input value “Ghid de parenting constient”
2. Press Enter -> to access its corresponding Product Page
3. Observe -> under the book title its price is set to ‘’0,00’’.

INPUT VALUES: ‘’Ghid de parenting constient’’

EXPECTED RESULT:

All products must be assigned the correct price value.

All products that are not intended to be offered as a gift/free sample (non promotional) should have a value “ > 0.00 lei’’.

The products should have a **validation rule** (**Price must be > 0.00 Lei**) to make sure that the price is not set to invalid values.

ACTUAL RESULT:

On Catalog Page and Product Page 1 item has been set an invalid value ‘’0.00 lei’’ even though it is not labeled as a promotional product.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools.
- Responsive Mode (Viewport: 400x668)
- Production Environment.

PRIORITY/SEVERITY:

- **Priority : High**

  This must be fixed immediately because it exposes the company to direct financial loss if users begin ordering the item.

  Pricing errors affect the company image and the users trust level.

- **Severity** : **Medium**

The absolute lack of a validation rule (Price > 0.00 Lei) means this is a system vulnerability, not just a one-time data entry mistake. Any admin could accidentally publish other free products.

ADDITIONAL INFORMATION:

This error happens only to 1 product on the entire website.

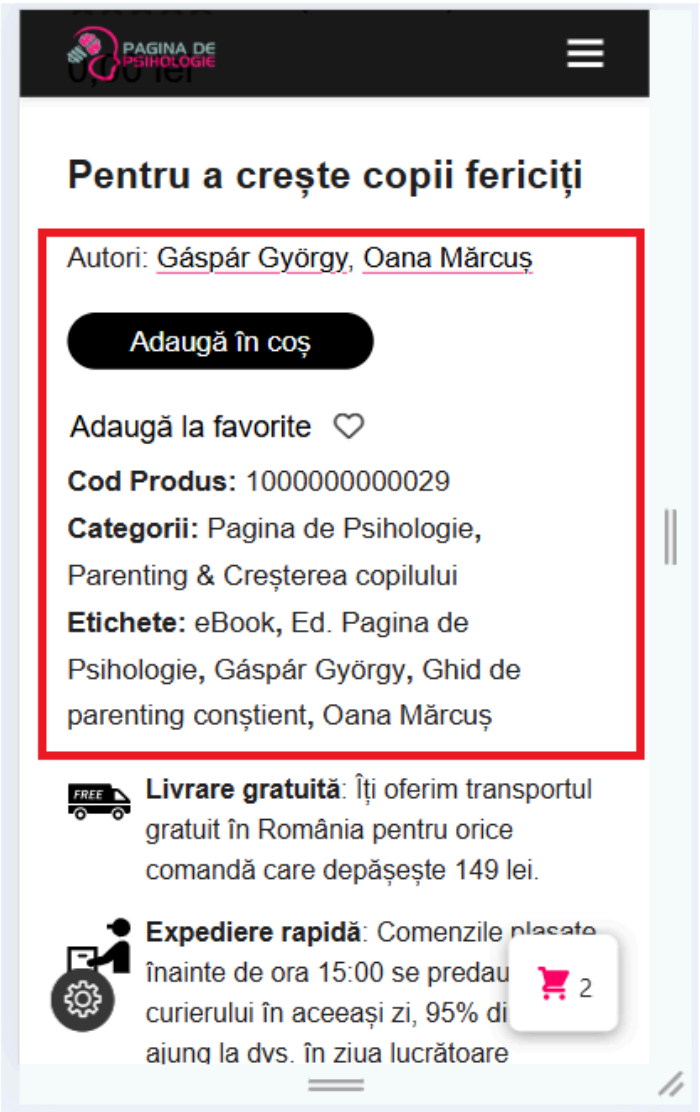

ATTACHMENTS:

[Product Page] Price set to 0.png

BUG 015 [Order Validation] Invalid price value "0.00 lei" item is allowed to be added in the Cart and complete transaction

[Checkout] Add to cart_0 lei product.png

[Checkout] Complete order_0 lei product.png

PRECONDITIONS:

1. The item ''Ghid de parenting constient'' exists in the database and has assigned the price ''0.00 lei'' and it is not a promotional product.

STEPS TO REPRODUCE:

1. Type in -> Site Header Search Field the input value “Ghid de parenting constient”
2. Press -> Enter to access its corresponding Product Page (https://www.paginadepsihologie.ro/produs/ghid-de-parenting-constient/)

3. Click on -> “Adauga in cos’’ Button to add the item in the cart
4. Click on -> ‘’Spre finalizarea comenzii’’ Button

INPUT VALUES: ‘’Ghid de parenting constient’’

EXPECTED RESULT:

All products that are not intended to be offered as a gift/free sample (non promotional) should have a value “ > 0.00 lei’’.

The checkout system should verify and stop the transaction if a product is not marked as a free sample and the price is set to ‘’0,00 Lei”. The validation should protect the company from financial loss.

ACTUAL RESULT:

A non promotional product with the price value equal to ‘’0,00 Lei’’ can be added to the Cart and complete the order.

STATUS PASS/FAIL: FAIL

ENVIRONMENT:

- Windows 11 Version 25H2
- Google Chrome Desktop (153.0.8010.48) using DevTools.
- Responsive Mode (Viewport: 400x668)
- Production Environment.

PRIORITY/SEVERITY:

- **Priority : High**

  The order verification system fails to check the item's value and allows the users to complete free transactions.

  This defect creates an immediate threat of **revenue loss and inventory depletion**.

  Legally and operationally, canceling multiple accidental "free" orders creates customer support friction and bad reviews.

- **Severity** : **High**

  The checkout system blindly processes and finalizes orders with a total of “0.00 lei” for standard retail products.

Server-side validation must be implemented immediately to stop ‘’0.00 Lei’’ transactions of non-promotional items.

ADDITIONAL INFORMATION:

ATTACHMENTS:

[Checkout] Order 0 lei product.png
